1. This communication is in response to applicants' amendment filed on April 8, 2003.

2. Newly submitted claims 4-60 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The search required for the newly cited claims is not required for the originally presented claimed invention (e.g. detail structure of a moving coil constrained to move; electrical connections; solid coil forms; method involving step of configuring coils to minimize Barkhausen noise; a method with a force detecting element; a method using a molecular force probe etc.).

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 4-60 withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Neff (2,452,862).

Neff discloses a displacement apparatus including a first and second non-magnetic coil forms (2,6) with a common axis, each wound with at least one winding (3,4,5); the outside diameter of the first form with its winding or windings being smaller than the inside diameter of the second form (Note Fig. 2) so that each may be displaced relative to the other with the first form inside the second form; the winding on the movable form magnetically coupled to the winding on the stationary form and a circuit generating a signal responsive to relative displacement between the coil forms.

4. Applicant's arguments filed on April 8, 2003 have been fully considered but they are not persuasive. With respect to claim 1, Neff clearly discloses a coil form 2 in figure 1 and an electronic voltmeter generating a signal responsive to relative displacement between the coil forms (Note e.g. figure 1).

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
